Briar Ln. - Mt. Zion, IL

Pearl City Rd. - Stephenson County, IL

Services:

Pavement Recycling

Full Depth Recycling is one of the fastest growing rehabilitation techniques being specified by pavement engineers today. FDR reuses existing base and surface materials for a lower cost and high returns, while increasing the speed of construction. FDR increases the strength of the pavement structure and reduces reflective cracking.

Mechanical Stabilization

- Pulverization
- Addition of new base materials

Chemical Stabilization

- Cement
- Fly Ash

Hot Mix Stabilization

- Foamed Asphalt
- Asphalt Emulsions

Dunn Company embraces this state-of-the-art technology, and with our innovative equipment and vast range of stabilization additives, we can use FDR to depths up to 12". The pulverized layers and additive(s) become a homogeneous well graded material with improved structural characteristics. The new stabilized base course is suitable for surfacing with Hot Mix Asphalt or a bituminous chip seal depending on the traffic requirements.
